## ABSTRACT

Presented alphabetically by state are the legal requirements for class sizes and caseloads for special education services as of June 1, 1973. The child's disability is said to be the main determinant of class size with classes for deaf and blind children generally having the lowest maximum enrollment and classes for the educable mentally retarded generally having the highest maximum class size. It is reported that some states allow a larger class size when an aide is employed. Age is given to be another major determinant of class size with a lower maximum class size mandated for younger children. Noted is Washington's regulation that for each partially seeing child integrated into the regular program the class size will be reduced by one to three normally seeing children. Caseloads for speech therapists are reported to average about 60 children, while caseloads for resource teachers of the visually handicapped may only be about 20 children. (DB)

FILMED FROM BEST AVAILABLE COPY

As the opportunities for handicapped children to receive an education expand in the United States, there is an increasing awareness that the degree and quality of this expansion is heavily dependent on the activities of government at all levels and in all branches -- executive, judicial, and legislative. Recognizing government's crucial role in the expansion process and the information needs of persons or agencies involved in or considering change, The Council for Exceptional Children through a grant from the Bureau of Education for the Handicapped, U.S. Office of Education established the State-Federal Information Clearinghouse for Exceptional Children (SFICEC) to provide this information.

The purpose of SFICEC is to identify, acquire, process, selectively retrieve, and disseminate information pertaining to government and the education of handicapped children. In carrying out this charge, SFICEC has developed a computer-based information system for the efficient and accurate retrieval of information.

To disseminate this information, SFICEC develops and distributes information products with material drawn from its data base. The products focus on specific areas pertaining to government and the education of handicapped children and utilize information from the law, administrative literature, attorney general's opinions and actual litigation. Other products discuss key issues and areas of concern to educators, parents, and public policy makers. In addition, SFICEC is also prepared to conduct searches to answer individual specific information requests.

Acknowledgement must be given to Beverly Wetzel, Nancy Selzer and Nancy Bolick of the State Federal Information Clearinghouse for Exceptional Children staff for the capable manner in which they contributed to the writing, typing, proofreading and in fact the entire production of this document.

Class size of educational programs for the handicapped is affected by many variables including the child's disability, age, the type of personnel employed, and the instructional setting. The most significant factor is, however, the child's disability.

Classes for deaf and blind children generally have the lowest maximum with six being the most commonly specified while classes for the educable mentally retarded are usually the highest with a maximum of fifteen occurring most frequently.

Another significant factor in the determination of class size is the utilization of teacher aides in special education classes. Almost 20% of the states allow the maximum enrollment of certain classes for the handicapped to be expanded when an aide is employed. In Arkansas, for example, the maximum class size in a special class for the learning disabled may be increased to ten from eight with the employment of an aide. Most common are provisions allowing for the expansion of class size for trainable mentally handicapped children with employment of an aide. In California, however, state law prohibits expanding class size when employing an aide. In Idaho the class size for educable and trainable mentally handicapped with an aide is determined on the basis of certification of the teacher. A teacher with interim certification and an aide may have the maximum class size of 15 and a teacher with full certification and an aide may have a class with a maximum of 18 children. In Nebraska ten trainable mentally retarded children may be assigned to one teacher aide with each qualified teacher responsible for supervising no more than five teacher aides.

Another determinant of class size is the children's ages and age ranges within a class. More than half the states use this type of determinant. Frequently maximum class size and less often minimum class size increase as the age of the children increases.

Conversely the greater the age range of children in a particular class the smaller the class size. In Nebraska for example the maximum class size for the trainable mentally handicapped is six if the age range is six years or more. If the age range is less than six years, the maximum class size is ten.

In order to facilitate mainstreaming handicapped children into normal programs the state of Washington has regulated that for each partially seeing child integrated into the regular programs the class size will be reduced by one to three normally seeing children; for each hearing handicapped child integrated into the regular program the regular class load will be reduced by up to four normally hearing children.

In Wisconsin class sizes for junior and senior high school age educable mentally handicapped children are increased if significant non-academic integration occurs. The resource room alternative seems most prevalent in programs for partially seeing and hearing impaired children and the greatest variety of program options also exists in these categorical areas. The second most frequently seen range and program options are available for learning disabled children.

Caseload for resource room teachers and speech therapists extend over a broad range. In North Carolina for example no maximum or minimum or average case load is stipulated. The regulations only require that children be taught "as intensively as is

professionally feasible and sound." Generally throughout the nation minimum case loads for speech therapists average around 60 children with the most frequent maximum being 85 to 100. In Illinois, for example, the case load for a speech therapist is 70 minimum and 100 maximum. New Mexico has a minimum of 80 and no stated maximums. One of the highest maximums is in Missouri where the minimum is 80 and the maximum is 125.

Caseloads for resource teachers of the visually handicapped are lower. In Indiana for example an itinerant resource teacher of the visually handicapped has a minimum case load of five and a maximum of 20. Teachers of the homebound and hospitalized generally have a weekly case load between five and fifteen. In Texas, for example, the minimum is six with no maximum for teachers of the homebound, orthopedically handicapped, pregnant students, and other health impaired children.

Although the material is as current as possible, the constant updating and revision of both law and regulations may render some of the material out of date.

<sup>57</sup>

Age range not to exceed 4 years

<sup>58</sup>No more than 15 pupils are assigned to one teacher at any given time except for music, gym, etc.

<sup>59</sup>In New Hampshire, "physically handicapped" children include speech handicapped, learning disabled, visually handicapped, blind, aurally handicapped and deaf children as well as those with other physical defects.

<sup>60</sup>Maximum with any one teacher at any one time except for gym, music, etc.

<sup>61</sup>Maximum class sizes may be increased by no more than 1/3 by the addition of teacher aides with advance approval from the Bureau of Special Education and Pupil Personnel Services. No class shall have on roll more than 1 1/2 times the maximum class size for that classification for departmentalized programs. For academic instructional purposes no class will have at any one time any more than the maximum number designated for that handicap, with the exception of physical education, art, and similar activities.

<b>NOTE:</b>		
<p>Recommended average class enrollment figures are used as a guide for approving units. Latitude is provided as to minimum and maximum class enrollment. Population limitations in smaller districts and situations in larger districts such as travel distance, availability of classrooms, special groupings, etc., may cause some classes to be formed at minimum enrollments. However, if a district with a number of special classes in a particular category, such as educable, falls below the recommended average class enrollment figure, this is subject to explanation at unit approval time.</p>

Special Class	12	15 <sup>92</sup>
TRAINABLE MENTALLY HANDICAPPED		
Special Class	-	10
SPEECH HANDICAPPED		
<p>Caseload-The number of children seen regularly by one therapist is determined by the combined severity ratings of children chosen for the caseload. The combined severity ratings must not exceed 60 units.</p> <p>Children with speech defects classified S-MI according to the degree of involvement described must be counted as follows: children in S classification will be rated 2-5. These children shall be referred to the consultant in speech and hearing in the Division of Special Educational and Pupil Personnel Services who, with the speech correctionist, may refer the child to a specialist for diagnostic evaluation. Children rated 5 will be counted as 5 units in the caseload, children rated 4 are counted as 4 units, etc. Children in classification MS, MO, and MI are counted as one child when they are seen twice a week, and 1/2 child when seen on a once-a-week basis.</p> <p>Certification of Caseload. Supervision, through certification of the caseload, shall be provided for those speech therapists who have not completed 30 hours in speech therapy and related courses and five years experience. The therapist, under the direction of the superintendent of schools, shall see that the caseload is certified by one of the following: the speech and hearing consultant, Department of Education; the University of Vermont, Speech Therapy Program; any therapist holding a master's degree, full certification by the Department of Education and five years of experience.</p> <p>Persons agreeing to certify caseload must determine that the caseload is within the competency of the therapist, advise on professional questions concerning the program outlined, and determine that the program does not exceed the 100 units based on severity of speech problems.</p>
